

TOP 10 REASONS DECON EQUIPMENT WASHERS ARE THE BEST

1

MULTIPLE WASH CYCLES FOR EVERY NEED

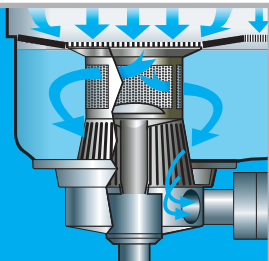

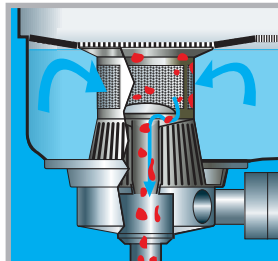

Short: 3 mins (for lightly soiled equipment)
Standard: 8 mins (most soiled equipment)
Intensive: 8 mins plus water change
(automatic water change deep cleans)

ACTIVEPLUS FILTRATION SYSTEM

Wash tank water is filtered multiple times throughout the wash cycle, eliminating toxins and contaminants from the tank at specific intervals as the filter is backflushed.

2

3

GENEROUSLY SIZED WASH CHAMBER HOLDS MORE!

SPACIOUS 12.9 CUBIC FT WASH CHAMBER

Wash 4 packs at once, just the air tanks, or 4 masks, boots, gloves and waterproof tools from your belt.

OSCILLATING WASH ARMS

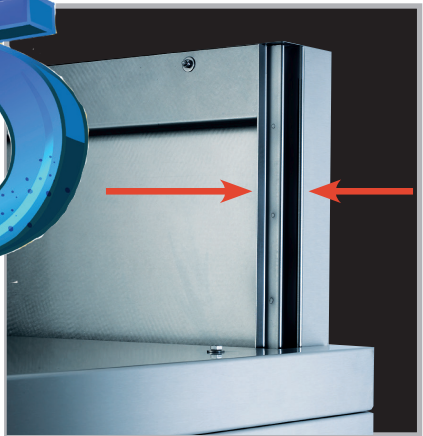

Multi-directional washing technology

4

Oscillating wash arms provide complete coverage. Rotating rinse arms ensure thorough rinsing.

5

DOUBLE-WALL INSULATION is a double win. This extra insulation reduces noise while TopClean D is running, and also keeps heat **inside the machine and out of your DECON area.**

6

THOUGHTFULLY DESIGNED FEATURES

Inside, TopClean D's ceiling is sloped to continually direct contaminants and toxins away from the cleaned items.

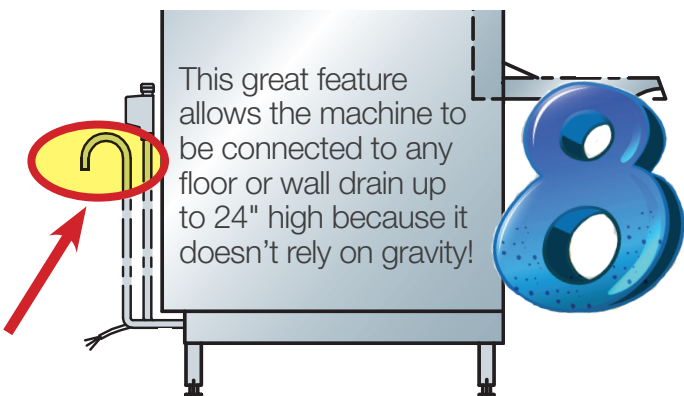

7

AUTOMATIC DETERGENT DISPENSERS

Never wonder or worry again about how much soap or rinse aid you should use. MEIKO's smart dispensers automatically titrate the correct levels you need for every wash, every time.

PUMPED DRAIN SYSTEM

8

BOOSTER HEATERS KEEP IT HOT!

Built-in, internal wash/rinse heaters maintain steady wash tank temperatures throughout the cycle. Incoming water supply can be warm or cold. (Note: Water heat-up time is longer when using a cold water supply).

9

10

PICTURE YOUR DECON ROOM OR AREA. We can help with drawings, renderings and custom ideas for your DECON Room layout with cabinetry, sinks and drying cabinets.
